INTELLIGENT MANAGEMENT
OF ELECTRONIC FORMALITIES

> AIM OF THE PROJECT

Dematerialize the contents of our handbags and money-bags (keys, documents, identity, cards) by putting under the exclusive control of the carrier all data and by allowing him to realize his public or private formalities (subscription of a consumer credit, registration to social offices, employment agency, universities, nurseries, check-in, car rental, etc...) in a 'tap'.

In break with the current approach which tends more and more to dispossess the user of his own data by putting it on the cloud, we propose an approach where the user keeps all data in a way totally secured and synchronized on all his connected terminals and keeps the hand on the modalities of diffusion of them.

The stake in the project is to prepare the arrival of the secure titles and the digital identities by focusing on

the uses centered on the public or private formalities and the citizen relation.

The project will be validated on life-size thanks to first-rate actors on the aimed markets.

> FUNDING

- Year of funding : 2013
- Call : FUI AAP16
- Funding participants :

- Duration of the project : 30 months
- Budget : 3.6 M€
- Effort : 36 men.year

> EXPECTED OUTCOMES

- More than 10 jobs
- More than 25M€ turnover

> PARTNERS OF THE PROJECT

- Leader of the project : DOCAPOST.
- Companies : ANYCES, ABC SmartCard.
- Research laboratory: I3S (Nice Sophia Antipolis University).
